

Electric Power Generation

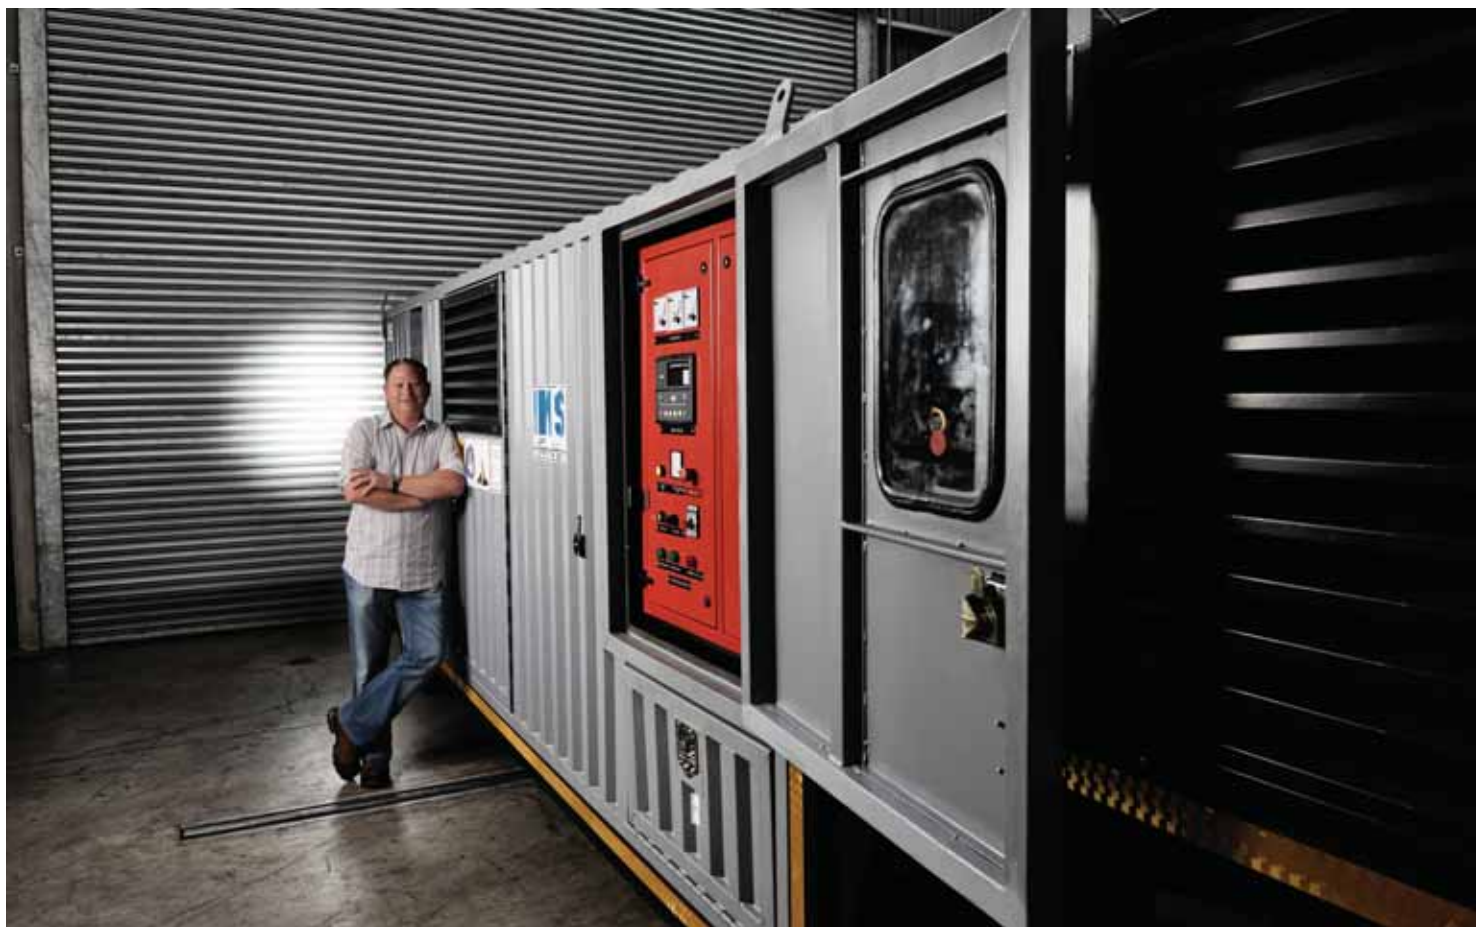

ZEST

WEG Group
Generator Set Division

Passion Through Our People

ZEST WEG Group Generator Set Division has supplied generators throughout South and Southern Africa; as well as Ghana, Nigeria, Zambia, Tanzania, Botswana and the DRC.

Generator Maintenance Service and Repair

ZEST WEG Group Generator Set Division service a number of makes of Diesel Generator Sets including:

- Perkins
- Deutz
- Cummins
- MTU
- Volvo
- Scania
- CAT

Service contracts include:

- Flexible maintenance contracts to suit customers individual requirements
- Major annual services
- Inspection services
- Electrical support and repairs
- Mechanical support and repairs
- Breakdown call out service

ZEST WEG Group has made significant investments in both infrastructure and the manufacturing plant in Cape Town.

Our complex enables us to plan, design, build and test at a single facility, to meet customers' requirements.

In addition, the ZEST WEG Group Generator Set Divisions plant has been designed to enhance our stockholding capabilities, while strengthening the ability to deliver after sales support to customers across the continent.

IMS Cape became a ZEST company in 2007 and a part of the ZEST WEG Group brand as of 2013. Positioned as a specialist supplier, the company started building generator sets in 1976 and now, more than three decades later, lists many of South Africa's largest corporations amongst its customers.

Designs are created to suit each and every application, both off-the-shelf and custom configurations are offered. Capacities are available in either stationary or portable configurations to in excess of 2000kVA per set.

Key sector users include:

- Telecommunications
- Mining
- Retail and shopping complexes
- Hotels
- Offices
- Hospitals and clinics
- Residential – new or refurbished high rise buildings
- Energy – pump and power stations
- Industrial – factories, warehouses and stores
- Petrochemical – refineries
- Municipal – sewage and water pumping

Integrated packages include:

- Mechanical and electrical manufacture and assembly
- Electrical design including control panel manufacture
- Supply and installation of transformers, cabling, bulk fuel systems, sound attenuation with standby generators
- Project management, installation, commissioning and maintenance

In most cases, generators are used as back-up to the electrical supply and as building regulations are updated to provide for latest safety standards, so too does the design and capability of the generators offered.

A key element of the ZEST Generator Set Divisions offering is the ability to configure designs to meet the customer's specific requirements in terms of components, size and control systems.

Custom design options:

- Up to 2, 800kVA single set (up to 11kV)
- Multiple sets synchronised
- Synchronisation with local utility
- Peak & Load lopping capability
